

## Maintenance tips on my new paint...

You can keep your new finish in superb condition by following these suggestions:

- Park in a garage or under a roof whenever possible
- Avoid parking under trees, sap and bird droppings may damage the finish. Remove these substances as soon as possible by rinsing with water (use a mild soap if necessary - not a detergent).
- Wash the vehicle frequently, preferably by hand. During the first 30 days, when the paint is especially fresh, clean the vehicle with water rinse only. In fact, water alone will usually do the trick. For heavy soil use a mild soap (not detergent).
- Do not wash your vehicle in the hot sun.
- Do not wipe your car with a dry cloth (use a chamois).
- Avoid automatic car washes where brushes are used. The stiff brushes can scratch the finish.
- Do not wax for the first 90 days.
